Profile Summary

- Graduate from VIT with experience in full-stack and backend engineering at Danfoss. Built production-grade Node.js services, REST APIs, and CI/CD pipelines at scale. Strong problem-solving skills with 500+ DSA problems solved.

Education

- **Vellore Institute of Technology** CGPA: 8.70
  M.Tech Integrated CSE (Core), Andhra Pradesh *2021 - 2026*

Skills Summary

- **Languages & Frameworks**: JAVA, Python, JavaScript, Node JS, ReactJS, HTML/CSS, YAML, Cypress, GIT
- **Databases**: SQL, MongoDB
- **Developer Tools**: VS Code, MySQL Workbench, AWS, Notion, Docker, Figma, Tomcat, Excel, GitHub
- **Concepts**: OOPS, Computer Networks, SDLC Methodologies, Data Structures, DBMS, Operating Systems, UI UX User Experience Design, Microservices, CI/CD pipeline
- **Soft Skills**: Leadership, Event Management, Writing, Public Speaking

Experience

- **Danfoss** Chennai, India
  Software Engineer Intern *Oct 2025 - Aug 2026*
  - **REST API Integration and Data Flow**: Implemented RESTful APIs using HTTP/HTTPS and JSON-based request/response handling, including API endpoint design, request validation, status-code handling, error handling, and asynchronous communication to ensure consistent and reliable data flow between application components.
  - **Backend Data Processing**: Built a Node.js backend service to process and transform content across 14 different languages, with UI-level validation to ensure consistent ID and selector mapping, enabling the application to run seamlessly in all 14 languages.
  - **Data Transformation Pipeline**: Designed reusable normalization utilities and automated Node.js workflows for complex schema transformations, expanding localization coverage by 80% and maintaining synchronized backend configuration across services.
  - **CI/CD Pipeline Configuration**: Implemented YAML-based CI/CD pipelines in Azure DevOps to automate application builds, test execution, and streamline software deployment workflows.
  - **Modular JavaScript Architecture**: Developed reusable JavaScript modules and integrated JSON-based data sources to improve code reusability, execution efficiency, and long-term maintainability.
  - **Pull Request & Version Control**: Raised and managed 30+ PRs in Azure DevOps, resolved Git merge conflicts during feature integration and repository migration, maintaining code stability across branches under active team collaboration.
  - **Tech Stack**: JavaScript, Node JS, REST API, Axios, Azure DevOps, Git, YAML, JSON.

ItJobXS (www.itjobxs.com) Remote
Web Developer *July 2024 - Nov 2024*

- **Responsive Web Page Design**: Collaborated with team members to develop a responsive ItJobXS page on AWS, improving engagement by 30% for 10,000 users.
- **User Verification and Authentication**: Implemented verification, reducing fake accounts by 85%, processing 5,000+ verifications daily on AWS with improved security measures.
- **Recaptcha Integration**: Integrated Google Recaptcha v3, reducing bot traffic by 70%, handling 15,000+ authentication requests daily via AWS Lambda.
- **Tech Stack**: HTML, CSS, JavaScript, MySQL, PHP, AWS EC2, and RDS for scalable development and deployment.

Projects

- **BrowseCart (React.js, TypeScript, Node.js, Express.js, MongoDB, REST APIs, Redis, k6, Postman) GitHub Link**:
  - Developed a local shop discovery platform with geolocation-based filtering within a 2 km radius.
  - Built scalable REST APIs for user authentication and shop listings using Node.js and Express.js.
  - Designed a microservices-style API architecture and integrated Redis for caching and performance optimization.
  - Performed API performance and load testing using k6 and documented endpoints with Postman Collections.
- **Car Rental System (ReactJS, Vite, MongoDB, Node.js, Express.js, Figma, Git) GitHub Link**:
  - Designed a fast vehicle search bar and categorized listings for improved navigation and user experience.

- Optimized performance with lazy loading and refined APIs, reducing load time by 1.5s and data fetch time by 35%.
- Integrated MongoDB to store booking data, ensuring reliable and efficient data management.

- **TripSaga (React.js, Node.js, Express.js, MongoDB, JWT, Postman, Render, Vercel) GitHub Link**:
  - Built a full-stack travel booking platform with secure authentication and role-based access using JWT.
  - Designed and developed REST APIs for authentication, bookings, and package management.
  - Created and maintained Postman API documentation for testing and team collaboration.
  - Deployed the backend on Render and the frontend on Vercel for production hosting.

- **MailFlow (Node.js, Nodemailer, Telegram Bot API, dotenv, Vercel)) GitHub Link**:
  - Built an end-to-end email automation system integrating the Telegram Bot API with Node.js and Nodemailer to trigger and manage email workflows through user commands.
  - Designed API-driven workflows to receive Telegram events, process user inputs, load email templates, and dynamically dispatch personalized emails.
  - Implemented automated scheduling and delivery logic to distribute emails within configurable time windows, reducing manual intervention and improving delivery reliability.
  - Secured API credentials and SMTP configuration using dotenv-based environment variables and deployed the application on Vercel for continuous, cloud-based execution.

Certifications

- **Oracle Cloud Infrastructure (Oracle)** March 2024
- **Soft Skills and Overview of Artificial Intelligence (TCS)** December 2023
